

iPhone settings for Digital Towpath Email Accounts

Name of setting	Setting	Description
Full Name	Your Name	Choose your sender name as you would like it to appear in messages that you send. Example: John Appleseed.
Email Address	Full EMail Address	Your email address for this account, such as appleseed@example.com
Incoming mail server settings		
These settings are for downloading messages (receiving email) from your email provider's mail server.		
Account Type	POP3	Choose IMAP*, POP, Exchange IMAP, or Exchange EWS1, as directed by your email provider
Description	Choose a Description	Choose the name that Mail will use for your account, such as Work, School, or Yahoo.
Incoming Mail Server (host name)	mail.digitaltowpath.org	The host name of the incoming mail server, such as mail.example.com.
User Name	FULL Email Address	Your user name for this account, such as appleseed. Some email providers want your full email address as your user name.
Password	Password	The email password you use to sign in to your account.
Port	995	The port number used by the incoming mail server. Common port numbers for incoming mail are 143 and 993 for IMAP accounts, and 110 and 995 for POP accounts.
Authentication	Password	Choose Password, MD5, NTLM, Kerberos, or None, as directed by your email provider.
Use SSL?	Turn SSL "ON"	Does the incoming mail server support SSL (Secure Sockets Layer) or TLS (Transport Layer Security) encryption?
Outgoing mail server (SMTP) settings		
These settings are for uploading messages (sending email) to your email provider's mail server.		
Outgoing mail server (SMTP)	mail.digitaltowpath.or	The host name of the outgoing SMTP (Simple Mail Transfer Protocol) server, such as smtp.example.com.
Port	465	The port number used by the outgoing mail server. Common port numbers for outgoing mail are 25, 465, and 587.
Use SSL?	Turn SSL "ON"	Does the outgoing mail server support SSL or TLS encryption?
Authentication	Password	Choose Password, MD5, NTLM, Kerberos, or None, as directed by your email provider. If None, you may need the additional settings below to send email when you're on a different network, such as from a Wi-Fi hotspot or Internet cafe.
